Not a very common pedigree shows the young Cadence-son Casino in the combination with Huray and Jublend. Rate is the mother of Casino and impresses on-farm with her high milk production (over 11.000 kg) and her enormous fertility with only 351 days calving interval. The reason for this high fertility is her rump that is the long, wide and correct angled. From the young genomic Brown Swiss sire Casino we expect very productive cows with best milking speed. The Casino daughters promise a lot of frame, top feet and legs and functional udder quality.
